Education

University of New South Wales (UNSW) [Feb 2018 – Feb 2021]

- Graduated with a B.Sc in Computer Science.

Work Experience

- **Internship at Macrovue Pty Ltd** (29th Nov 2018 – 18th Jan 2019)

  - Enhanced the firm's client onboarding process by implementing an 'advisers' platform which seamlessly connected clients to their financial advisers.
  - Worked across full stack on a Django-React application, deployed using AWS.

- **Freelance Developer** (Mar 2019 – ongoing)

  - Developed a "content-discovery" platform for my client based in Singapore.
  - Aspiring artists are able to post their work on *OrdinaryPlaylists*, which in turn helps these artists reach a wider audience through my client's socials.

Projects

SecretFlow (https://secretflow.io/)

A personal project / startup idea that I am currently working on. SecretFlow is a real-time smart money tracker. Our app provides real-time streaming of unusual market flow showing symbols that get an unusual bullish or bearish flow of money. Developed using a Django-React stack, deployed on AWS.

OrdinaryPlaylists (https://www.ordinaryplaylists.com/)

My first take on freelancing! Developed a "content-discovery" platform where aspiring artists can contribute their work to get recognition on my client's social media platforms. Moderators of the platform primarily use this platform to put together work from different artists into a single piece of "art". Developed using a Django-React stack, hosted on Heroku.

My Portfolio Application (https://www.farhanghazi.xyz/)

My own personal website set up as a means to allow any prospective client to get in touch with me and/or learn more about me and my work. Deployed on Heroku as a Django-React application.

Technical Skills

- **Tools:** *UNIX, Postman, VSCode.*
- **Languages** – Highly proficient in *Python, JS*, PHP, Java, *Typescript, C*
- **Web Development**
  - Backend: *Django, Firebase, Flask* & *Tornado*.
  - Frontend: *HTML/CSS, ReactJS, VueJS, Bootstrap, Ant Design, Material UI*
- **Databases** – *MySQL, MongoDB* & *PostgreSQL*.
- **Version Control System** – *Git, Bitbucket*.
- **Project Management Tools** – *JIRA, Confluence*.
